

# Subscriptions Release Notes

MobilePay Subscriptions 2.0.0

We are proud to announce that we are releasing Subscriptions version 2.0.0. This release entails a breaking change, and it is therefore important that you take action to avoid any downtime.

## New Features

There are no new features.

## Enhancements

There are no new enhancements.

## Resolved Issues

There are no resolved issues.

## Known Issues

There are no known issues.

## API Differences

We previously introduced a new base path to all endpoints:

<https://api.sandbox.mobilepay.dk/subscriptions/api/>

To replace our existing base path:

<https://api.sandbox.mobilepay.dk/recurringpayments-restapi/api/>

To offer backwards compatibility and provide a fluent transition, both base paths have been available. However, by the end of the year (31<sup>st</sup> of December), we will retire Subscriptions version 1.2.7, and base path <https://api.sandbox.mobilepay.dk/recurringpayments-restapi/api/> will no longer be available. Therefore you must ensure that you subscribe to Subscriptions version 2.0.0 and change all base paths to <https://api.sandbox.mobilepay.dk/subscriptions/api/> before end of year.

A great advantage by changing base paths is that you can use our newest feature Refunds, which is available through the new API. So have a look at the new API here: <https://sandbox-developer.mobilepay.dk/node/766>

## Subscriptions (2.0.0) (1 API included)

The MobilePay Subscriptions API contains endpoints for the merchant, needed to implement MobilePay Subscriptions in your system. MobilePay Subscriptions allow you to offer recurring billing for your customers, including One-off payments and Refunds.

Please contact us at [help@mobilepay.dk](mailto:help@mobilepay.dk) if you have any questions or concerns.
